

Alberto Valiño Carro

Senior Full-Stack Developer & Cloud / Platform Engineer

Dublin, Ireland / A Coruña, Spain · albertovcarro@gmail.com · +353 830 100 201 · albertovalinocarro.github.io · github.com/albertovalinocarro
Fluent in English & Spanish

PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 8+ years shipping production PHP (Laravel) and JavaScript (React) across public-facing and internal platforms at scale — increasingly working the full delivery stack, from application code down to the cloud infrastructure it runs on. Comfortable owning complex features end-to-end: schema design and query optimisation, API contracts, async job queues, and React component architecture. Currently leading a greenfield AWS platform rebuild — designing an isolated multi-account architecture and authoring the entire infrastructure layer as code in Terraform (VPC networking, containerised ECS Fargate compute, proxy-fronted IAM-authenticated databases, and managed secrets and encryption). Experienced modernising legacy PHP codebases, raising test coverage, and shipping reliable software in agile, distributed teams.

CORE SKILLS

Backend

PHP 8 · Laravel · Eloquent · Queues / Horizon · REST API · PHPUnit / TDD · Python · Composer

Cloud & Infrastructure (IaC)

AWS · Terraform · VPC / subnets / security groups · ECS Fargate · RDS + RDS Proxy (IAM auth) · ElastiCache Redis · S3 · KMS · Secrets Manager · IAM

Databases & Storage

MySQL / MariaDB · PostgreSQL · MongoDB · Redis · Query optimisation · Data modelling

Practices

Infrastructure as code · least-privilege IAM · secure-by-default networking · plan-and-review workflow · TDD & PR review · runbooks & documentation

Frontend

React · TypeScript · JavaScript ES6+ · Vue 3 · Inertia.js · Svelte 5 / SvelteKit 2 · Tailwind CSS v4 · Blade

DevOps, CI/CD & Containers

Docker · AWS CodePipeline / CodeBuild / CodeDeploy · GitHub Actions · ECR · Blue/green deployments · CloudWatch · Linux · Nginx

AI & Automation

LLM tooling · LangChain / OpenAI · MCP integrations · Python automation & data ingestion

Currently Building

Trainer Tracker (SvelteKit 2 + Laravel, live) · SyncBridge (Symfony 7.4) · MCP integrations · AI portfolio chat widget

KEY ACCOMPLISHMENTS

- Architecting a greenfield, multi-account AWS platform to replace a single hand-configured EC2 host running a business-critical internal telecoms system — isolated Dev / Staging / Production accounts, VPC networking with identity-based security-group trust chains, ECS Fargate compute, an RDS database fronted by a proxy with IAM authentication, ElastiCache, and customer-managed KMS encryption — the entire stack defined as code in Terraform.
- Authored a reusable Terraform module structure (network, data, compute, pipeline) so Dev, Staging, and Production are the same code with different variables — making environments repeatable, reviewable as pull requests, and free of configuration drift.
- Designed an AWS-native CI/CD pipeline (CodePipeline / CodeBuild / CodeDeploy) with blue/green ECS deployments and automated rollback, replacing manual SSH-based releases.
- De-risked the rebuild with a full legacy audit — cataloguing 33 databases and ~21,000 files to map background jobs, live payment integrations, and security exposures — and produced the architecture, build-plan, and cost documentation that carried the design through senior architecture review.
- Refactored an 8-year-old monolithic PHP codebase into a modular Laravel architecture; replaced ad-hoc includes with service classes, introduced PHPUnit suites from near-zero coverage, and moved from manual FTP deployments to containerised CI/CD.
- Designed and built a REST API powering a telecom asset-management platform — modelled relational schemas for complex asset hierarchies, eliminated N+1 issues via eager loading, and introduced Redis-backed queues for async report generation, cutting page-load times by ~60%.
- Built a React + Laravel data-visualisation dashboard used daily by non-technical operations teams; introduced TypeScript, component-level unit tests, and a consistent design system that significantly reduced UI bug reports.
- Implemented secure authentication flows (Laravel Passport / Sanctum), role-based access control via policies and gates, and API rate-limiting — enabling safe exposure of internal data to third-party integrators.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer — Three [Ireland \(Three.ie\)](#) · Jul 2017 – Present · Dublin, Ireland

- Leading the infrastructure and platform modernisation of a business-critical internal telecoms platform — replacing a legacy single-EC2 raw-PHP application (1,000+ files, no automated tests) with a containerised Laravel application on a secure multi-account AWS foundation.
- Authored the full infrastructure-as-code layer in Terraform — VPC and subnet networking, identity-based security-group trust chains, RDS with an IAM-authenticated RDS Proxy, ElastiCache Redis, and customer-managed KMS encryption — structured as reusable modules across Dev, Staging, and Production.
- Designed AWS-native CI/CD (CodePipeline / CodeBuild / CodeDeploy) with blue/green ECS Fargate deployments and rollback and drove the design through formal architecture review with senior stakeholders.
- Owned feature development across the full Laravel + React stack — migrations, Eloquent models, controllers, service classes, jobs, and React components from initial spec to production.
- Refactored legacy spaghetti PHP into testable, service-oriented Laravel code; introduced PHPUnit test suites and enforced PR-review standards to hold coverage over time.
- Engineered asynchronous job queues (Laravel Queues + SQS / Redis) for high-volume reporting workflows, decoupling slow operations from HTTP requests and making the system resilient to traffic spikes.
- Optimised slow MySQL queries using EXPLAIN, composite indexes, and query restructuring — resolving multiple production performance incidents and reducing query time on critical reports.
- Mentored developers through code review and pair programming; promoted TDD, SOLID principles, and clean Git practices, and authored onboarding documentation across the team.

Web Developer — [BEUTiFi.com](#) · Mar 2017 – Jul 2017 · Dublin, Ireland

- Developed and maintained frontend and backend features for an early-stage e-commerce platform using PHP and JavaScript.
- Collaborated in a small team, gaining experience with agile workflows and production deployment cycles.

Web Developer — [GAIA](#) · Sep 2015 – Feb 2016 · A Coruña, Spain

- Built and maintained web applications for clients using PHP and JavaScript, working across the full stack from database queries to UI implementation.

EDUCATION & QUALIFICATIONS

Diploma in Cybersecurity · University College Dublin (UCD) 2024

Bachelor's in Software Development · CPR A Fundación, A Coruña 2013 – 2017

PERSONAL PROJECTS

Trainer Tracker — [trainer-tracker.com](#) · Sep 2025 – Present · Side Project

- Full-stack SaaS training log built solo — SvelteKit 2 + Svelte 5 (SSR + client), Laravel REST API, PostgreSQL 16, Redis 7; deployed live on Railway EU West via Docker + Cloudflare with CI/CD auto-deploy on push to main.
- Dual-role system (Athlete / Coach) with pivot-table relationships; dashboard includes a GitHub-style annual training heatmap, progress charts, per-exercise strength progression, and live streak tracking.
- Production-grade security: Sanctum token auth in httpOnly cookies, rate limiting, CORS locked to the production domain, 7-day token expiry with daily pruning, and Snyk dependency scanning.

Job Tracker — [job-tracker-avc.vercel.app](#) · May 2026 – Present · Side Project

- Vue 3 + TypeScript SaaS — Composition API (ref, reactive, computed, watch), three Pinia stores, Vue Router with auth guards, and Supabase Auth + RLS; deployed on Vercel.

SyncBridge — [github.com/albertovalinocarro/sync_bridge](#) · 2025 – Present · Side Project

- Symfony 7.4 middleware platform — multi-client webhook ingestion with HMAC-SHA256 verification, idempotency checking, async processing via Messenger + Redis, outbound WMS/ERP sync, client-scoped REST API with Bearer-token auth, retry commands, structured Monolog logging, and a PHPUnit unit + functional test suite.

ADDITIONAL

- **MCP integrations + AI tooling** — building with Model Context Protocol servers and LangChain / OpenAI; portfolio ([albertovalinocarro.github.io](#)) built with React 19, TypeScript, Tailwind v4, Framer Motion, and Supabase.
- Proactive, structured approach to engineering problems; comfortable in distributed, fully remote environments. Fluent in English and Spanish.
