

Alberto Valiño Carro

Senior Full-Stack PHP Developer (Laravel & React)

Dublin, Ireland / A Coruña, Spain · albertovcarro@gmail.com · +353 830 100 201 · albertovalinocarro.github.io · github.com/albertovalinocarro
Fluent in English & Spanish

PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 8+ years writing production PHP (Laravel) and JavaScript (React) across public-facing and internal platforms at scale. Hands-on throughout the full development cycle — from schema design and query optimisation to API contracts, async job queues, and React component architecture. Experienced modernising legacy PHP codebases, improving test coverage, and shipping reliable software in agile, distributed teams. Comfortable owning complex features end-to-end and working autonomously in fully remote environments.

CORE SKILLS

Backend PHP 8 · Laravel · Eloquent · Queues · REST API · PHPUnit / TDD · Python · Composer	Frontend React · TypeScript · JavaScript ES6+ · Svelte 5 · SvelteKit 2 · Vue 3 · Tailwind CSS v4 · Blade
Databases & Storage MySQL · PostgreSQL · MongoDB · Redis · Query optimisation · Data modelling	Cloud, DevOps & Tooling AWS (S3, RDS, EC2, IAM, CloudWatch, SQS) · Docker · GitHub Actions · CI/CD · Linux · Nginx
AI & Automation LLM tooling · LangChain / OpenAI · Python automation & data ingestion · AI-assisted workflows	Currently Building Trainer Tracker (SvelteKit 2 + Laravel 12, live) · SyncBridge (Symfony 7.4) · MCP integrations · AI portfolio chat widget

KEY ACCOMPLISHMENTS

- Refactored a 8-year-old monolithic PHP codebase into a modular Laravel architecture; replaced ad-hoc includes with service classes, introduced PHPUnit suites from near-zero coverage, and eliminated manual FTP deployments in favour of GitHub Actions + Docker.
- Designed and built a REST API powering a telecom asset management platform — modelled relational schemas for complex asset hierarchies, eliminated N+1 issues via eager loading, and introduced Redis-backed queues for async report generation, cutting page-load times by ~60%.
- Built a React + Laravel data visualisation dashboard used daily by non-technical operations teams; introduced TypeScript, component-level unit tests, and a consistent design system that significantly reduced UI bug reports.
- Implemented secure authentication flows using Laravel Passport / Sanctum, role-based access control via policies and gates, and API rate-limiting — enabling safe exposure of internal data to third-party integrators.
- Led the migration from on-premise servers to AWS (EC2, RDS, S3, IAM, CloudWatch), scripting infrastructure provisioning, setting up CloudWatch alarms, and documenting runbooks — improving uptime observability and removing a single point of failure.
- Wrote Python-based data ingestion pipelines and LLM-powered automation tools that reduced repetitive analyst workflows, feeding cleaned data into internal Laravel APIs.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer — [Three Ireland \(Three.ie\)](#) Jul 2017 – Present · Dublin, Ireland

- Owned feature development across the full Laravel + React stack — writing migrations, Eloquent models, controllers, service classes, jobs, and React components from initial spec to production deployment.
- Refactored legacy spaghetti PHP into testable, service-oriented Laravel code; introduced PHPUnit test suites and enforced PR review standards to maintain coverage over time.
- Engineered asynchronous job queues (Laravel Queues + SQS) for high-volume reporting workflows, decoupling slow operations from HTTP requests and making the system resilient to traffic spikes.
- Optimised slow MySQL queries using EXPLAIN, composite indexes, and query restructuring — resolving multiple production performance incidents and reducing average query time on critical reports.
- Delivered React frontend features with TypeScript and hooks; introduced Storybook-style component isolation to improve reusability and reduce regression bugs.
- Collaborated with DevOps to build Docker-based local dev environments mirroring production, and authored GitHub Actions workflows for linting, testing, and blue-green deployments to AWS EC2.
- Mentored junior developers through code review, pair programming, and onboarding documentation; promoted TDD, SOLID principles, and clean Git practices across the team.

Web Developer — [BEUTiFi.com](#) Mar 2017 – Jul 2017 · Dublin, Ireland

- Developed and maintained frontend and backend features for an early-stage e-commerce platform using PHP and JavaScript.
- Collaborated in a small team environment, gaining experience with agile workflows and production deployment cycles.

Web Developer — [GAIA](#) Sep 2015 – Feb 2016 · A Coruña, Spain

- Built and maintained web applications for clients using PHP and JavaScript, working across the full stack from database queries to UI implementation.

EDUCATION & QUALIFICATIONS

Diploma in Cybersecurity · University College Dublin (UCD) 2024

Bachelor's in Software Development · CPR A Fundación, A Coruña 2013 – 2017

PERSONAL PROJECTS

Trainer Tracker — [trainer-tracker.com](#) Sep 2025 – Present · Side Project

- Full-stack SaaS training log built solo — SvelteKit 2 + Svelte 5 (SSR + client), Laravel 12 REST API, PostgreSQL 16, Redis 7; deployed live on Railway EU West via Docker + Cloudflare with CI/CD auto-deploy on push to main.
- Dual-role system (Athlete / Coach) with pivot-table relationships; dashboard includes a GitHub-style annual training heatmap, weight/measurement progress charts, per-exercise strength progression, and live streak tracking.
- Production-grade security: Sanctum token auth in httpOnly cookies, rate limiting, CORS locked to production domain, 7-day token expiry with daily pruning, and Snyk dependency scanning.

Job Tracker — [job-tracker-avc.vercel.app](#) May 2026 – Present · Side Project

- Vue 3 + TypeScript SaaS — Composition API (ref, reactive, computed, watch), three Pinia stores, Vue Router with auth guards, and Supabase Auth + RLS; deployed on Vercel.

SyncBridge — [github.com/albertovalinocarro/sync_bridge](#) 2025 – Present · Side Project

- Symfony 7.4 middleware platform — multi-client webhook ingestion with HMAC-SHA256 verification, idempotency checking, async processing via Messenger + Redis, outbound WMS/ERP sync, client-scoped REST API with Bearer token auth, retry commsands, structured Monolog logging, and PHPUnit unit + functional test suite.

ADDITIONAL

- **MCP integrations + AI tooling** — building with Model Context Protocol servers and LangChain/OpenAI; portfolio ([albertovalinocarro.github.io](#)) built with React 19, TypeScript, Tailwind v4, Framer Motion, and Supabase.
- Proactive, structured approach to engineering problems; comfortable in distributed, fully remote environments. Fluent in English and Spanish.
